

Ethanol, or ethyl alcohol (or more simply alcohol), is an alcohol of the semi-developed formula  $CH_3-CH_2-OH$ . It is a colourless, volatile, flammable and water miscible liquid in all proportions. It's a psychotropic drug, and one of the oldest recreational drugs, in the form of an alcoholic beverage. Ethanol is used by the agri-food industry (for the production of spirits in particular), perfumery and pharmacy (as a solvent) as well as biofuel (bioethanol). It is also used in alcohol thermometers.

The preservation of food in alcohol is mainly used for fruit. It is the antiseptic ability of alcohol that allows preservation.

With these methods, no alteration of the food but be careful however, know that storage in alcohol can modify the original taste of the product.
